

Weather-Based Crop Advisory System

Unified Modeling Language Documentation

UML Diagrams

Academic Project Documentation

1. Use Case Diagram

The diagram shows the main interactions between the Farmer, Admin and the system.

2. Class Diagram

The class diagram identifies the core entities and operations of the proposed system.

3. Activity Diagram

The workflow follows the farmer journey from login to advisory viewing, including weather-data error handling.

4. Sequence Diagram

The sequence shows communication among the farmer interface, backend, external weather service and advisory logic.

5. ER Diagram

The ER model connects users, locations, crops, weather records, advisory rules and generated advisories.

6. Component Diagram

The component view separates the user interface, backend API, advisory engine, database and external weather service.

7. Deployment Diagram

A typical deployment arrangement is shown. Exact hosting and database technologies can be selected during implementation.
